(54) DYNAMIC IMAGE DATA OUTPUT DEVICE AND METHOD FOR BETTING ITS ENVIRONMENT

(57) Abstract:

PROBLEM TO BE SOLVED: To automatically set the environment in the dynamic image data output of a dynamic data output device according to the kind of a display card to be used.

SOLUTION: Two interfaces for ZV port and VMI are prepared in a DVD decoder 18 as the interface for outputting a dynamic image data to the video input port of a display controller 19 so that it is conformable to both interfaces of ZV port and VMI. Which output interface is to be used is automatically switched according to the kind of the display controller 19 instructed by a CPU 11. Thus, when the display controller 19 is replaced by a user, the output interface according to the new display controller can be automatically switched, and a dynamic image transfer according to the display controller to be used can be regularly performed.
